DETAILED ACTION

Election/Restrictions

1. Claims 1-3, 5, 8-15 are allowable. The restriction requirement between species, as set forth in the Office action mailed on 23 June 2006, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 4, 6, 7, and 16-25, directed to varying signaling limitations among other subject matter, are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. However, claims 42-49, directed to measuring a standard airflow with the option of associating the airflow with a linearity characteristic, are withdrawn from consideration because they do not all require all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Steven B. Phillips on 13 November 2007.

The application has been amended as follows:

CANCEL claims 42-49.

Claims 42-49 are drawn to subject matter that was withdrawn with traverse in the election filed 21 August 2006. The explanation for continuing to exclude these claims in light of the allowance of claims 1-41 is detailed above in paragraph one.

3. The following is an examiner's statement of reasons for allowance:

Prior art was not relied upon to reject claims 1-41 because the prior art fails to teach and/or make obvious an air sampler or apparatus for adjusting an operating speed for an air moving arrangement in an air sampler, or a method of adjusting an operating speed for an air moving arrangement in an air sampler, comprising: a control system or means for determining a measured airflow based at least in part on a linearity characteristic of an integrated airflow sensor in combination with all of the remaining limitations of base claims 1, 32, and 37.

The prior art to Levy et al. and Juntunen et al. disclose linearization

circuits/networks for use with an air flow device; however, the references fail to provide motivation to combine these teachings with an air sampling device claimed.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

The prior art to US 3,577,984 (Levy et al.) discloses a spirometer for measuring a plurality of airflow and air volume parameters of a patient. The spirometer is provided with a linearization network to convert measured airflow into volume signals during successive intervals of a measurement cycle.

The prior art to US 5,479,812 (Juntunen et al.) discloses a method and apparatus for providing calibrated and linearized flow sensors variable air volume systems.
